

HEATERS & FIREPLACES

GAS & ELECTRIC HEATERS

1. Keep heaters on a dry, flat and even surface and at least 1 metre away from surrounding objects
 2. Ensure cords are not damaged and are well-organised to minimise trip and strangulation hazards for children
 3. Ensure the room is well-ventilated when the heater is operating
-  Do not leave heaters unattended. Turn the heater off if you are going to sleep or leaving the house
 -  If you smell gas, turn off the heater immediately and contact your gas supplier

FIREPLACES & BARBECUES

-  Carbon monoxide poisoning is a serious health risk. Heating devices labelled for outdoor use should not be used indoors
- Call an authorised professional to check that all vents and chimneys are clean and free from blockages
- Fireplaces, heaters and barbecues should be used in well-ventilated areas
